

## USED COFFEE HERMETIC STORAGE BAGS

Avocado Engineering currently has access to used coffee hermetic storage bags, which are used for coffee shipment into Australia in a completely sealed condition to protect the coffee from the environment and atmosphere. These hermetic bags are multilayer bags with a very high resistance to oxygen and moisture. We have partner Australian companies that work closely with us to recycle their hermetic bags when the coffee beans arrive in Australia.

We are able to supply significant quantities of USED Hermetic bags for coffee/other grains that can be reused for example for coffee shipment, grain shipment, etc.

Some examples of the hermetic bags available are Ecotact 80: 762 mm (W) x 1270 mm (L) or similar size hermetic bags from GrainPro Inc. (Supergrainbag I B – GPSB I B) as per picture below.

For more information on the specification of the products available, please visit below links from Ecotact and GrainPro Inc.

Please note that all of these bags have been used for transport of coffee beans. However, they are in great conditions and can be reused for transport. There is no hook stickers and cable ties supplied with these used bags (ONLY the Hermetic Bags are available).

If there is any interest in the bulk quantities of bags for your grain storage and transport applications, please contact us and provide us with your requirements and we will be able to help you further.
